Opening Solutions

Experience a safer  
and more open world

## Code Handle is perfect when people are coming and going

*“Code Handle provides the simplest solution for access control in a small facility like ours.”*

*Borja Saldias Retegui, Founder, Fylab*

### Consultation and storage rooms

Expensive special equipment and one to one consultation rooms are protected by a secure PIN and handle

### Project

**Company:** Fylab ([www.fylab.es](http://www.fylab.es))

**Segment:** Small medical

**Location:** Irun, Spain

**Devices installed:** 3 Code Handle door locks

**Year of installation:** 2017

### Challenge

Fylab is a private medical practice in the Basque town of Irun. Its expert team provides specialist consulting and care in physiotherapy, nutrition, chiropody and psychology services, including to the local professional football club, Real Union. Fylab sought easy electronic door security for their consulting rooms. These rooms house expensive specialist equipment for all therapeutic disciplines offered by Fylab.

Practice staff must also feel safe leaving personal items briefly when taking a break from their work. Key requirements for Code Handle at Fylab included:

- A simple, secure access solution designed to work in a facility that receives a lot of daily traffic, both from professionals and the public
- The ability to lock and unlock Fylab’s consulting rooms without mechanical keys
- A locking device that is easy to retrofit to different types of doors
- ‘Clean’, contemporary device design to match Fylab’s modern medical workplace.

### Solution

The Code Handle PIN-locking door handle added electronic security to 3 consulting room doors at Fylab — without wires or cables.

*“I am no artist or handyman, but I managed to fit the handles within 10 minutes,”* says Fylab founder, Borja Saldias Retegui. Two screws fit a Code Handle to almost any interior door between 35mm to 80mm thick. At Fylab, Code Handle locks both regular and glass doors, keeping contents safe without keys or an expensive access control system. Because every Code Handle allows up to 9 different PIN numbers (4 to 6 digits), all authorised staff at Fylab can have their own security code. The practice manager can cancel PINs at any time using the master PIN.

The device’s electronic PIN security is powered by two standard batteries inside the handle.

For convenience, Code Handle opens freely from the inside. It locks itself when closed, ensuring consulting rooms are secure without employees remembering to lock up.

*“We like the solution a lot because we can do away with keys,”* adds Borja.
