

Get acquainted with Openings Studio

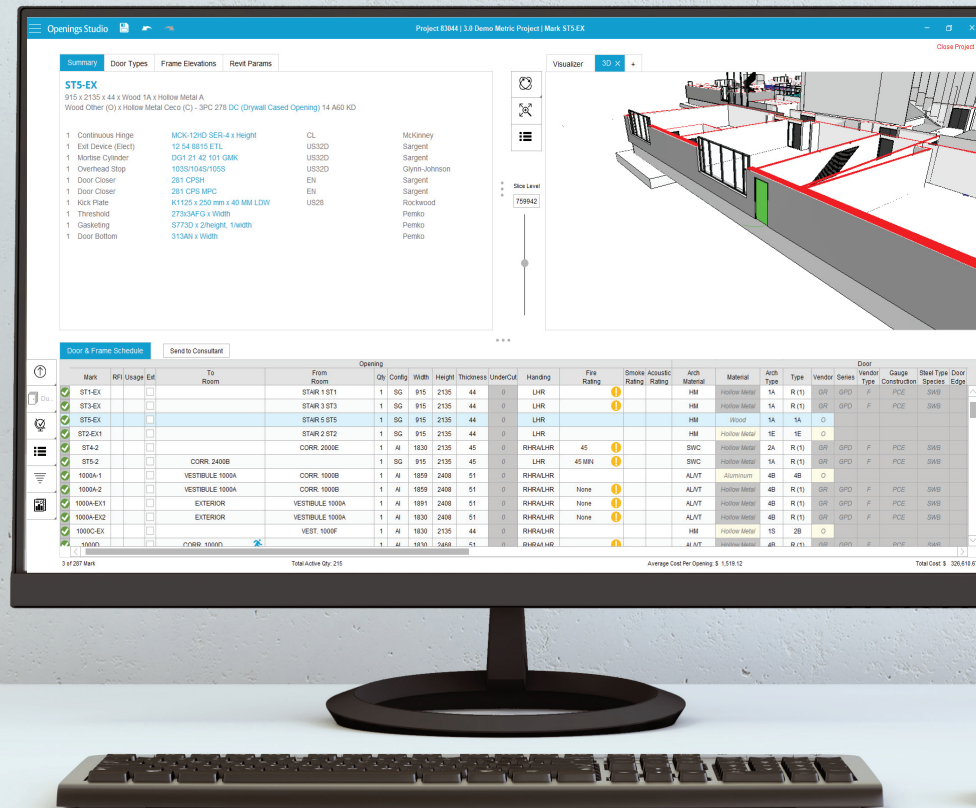

Render complete openings, with hardware. Preview in 3D.

Access manufacturer catalogs, technical data sheets, wiring diagrams, templates and more.

Create openings, complete with doors, frames, hardware and specifications.

Compare material selections for variable pricing options.

Produce three-part formatted specification section matching 3D models for project contract documents.

Get to Know Openings Studio

Openings Studio is a software tool designed for all stakeholders in the building process and for the entire lifecycle of the building. It integrates directly with design software, such as Autodesk Revit®, to seamlessly transfer project data for complete door hardware schedules and specifications.

Easy Collaboration

Gain universal access to design standards for all stakeholders

Save Time

More efficiently manage building projects

Eliminate Confusion

No more costly mistakes when communicating with spec writers

Openings Studio manages openings through the entire life-cycle with features such as:

Autodesk® Revit® Door Families

Build thousands of door families with customizable frames & door types. Create hollow metal, wood, aluminum, curtain panel doors, swinging doors, surface sliders, pocket doors, and more!

Virtual Design Guide

The Virtual Design Guide puts decision-making back in the hands of the owner. Openings Studio enables end-users to specify products at the start of the project, and virtually share design guidelines with architects before planning begins. Architects can download existing door families for inclusion into BIM, allowing for consistency and accuracy in the specification at the beginning of the project.

Smart Tagging

Looking for a better openings management tool? Don't waste time or reorder the wrong parts. Keep track of each door and hardware through Openings Studio. Create and print smart tags directly from Openings Studio. After placing the tag on the door, scan the smart tag to see door and hardware information, specific to each opening during inspections and site surveys. Access installation or product manuals for quicker maintenance and replacement.

Electrical Elevations

Security consultants, electrical engineers and more can now generate 3D access control product applications and elevation drawings. Replace the traditional way of creating line drawings and elevations with Openings Studio. Streamline basic electrical drawings, annotations, scheduling and tagging of floor plans directly into a 3D BIM environment.
