

# Ahoy Arena, Netherlands

## Project Fast Fact

### Location

Rotterdam, Netherlands

### Complete year

1950

### Architect

Frank Lloyd Wright

### Operator

AEG

### Owner

Ontwikkelingsbedrijf  
Rotterdam

### Feature products

Aperio™ access control  
system

## Challenge

With hundreds of events every year, Ahoy needed a secure and flexible locking system with maximum manageability. The present mechanical locking system was no longer efficient due to the loss of keys. The solution also had to adapt to the existing access control system rather than replacing the entire access control system.

## Solution

Registration, authorization and security; these are a few of the requirements Ahoy had for its new locking system. Around 150 doors in the Sport Palace and the Plaza were equipped with Aperio™ access control system. Aperio made a simple security upgrade possible. Customer installation costs were limited by only minimal modifications to the existing doors and by making use of the existing card readers.

It is now possible to see exactly who the last person was to be in a room and manage access rights for each door. With the easy to expand Aperio wireless lock technology, Ahoy is well prepared for the future.
