door opening solutions

UK Specification Secures Kettering Primary School

Companies

pHp Architects

Segment: Education

Property type: School

Location: St. Andrew's Church of England Primary School, Kettering

Challenge

The challenge in all schools is to prioritise safety and minimise the risk of injury, while providing a comfortable learning and teaching environment for both pupils and staff.

"The doorset specification was part of a complex series of extensions on the property, providing larger classroom space. We were working on a confined site while keeping the school in use during this time, so this proved challenging at times."

Solution

Drawing on a wide range of experience in the education sector, ASSA ABLOY UK Specification provided a range of value added services, including the use of BIM objects to assist in the specification process.

In addition, products were selected taking into account the number of cycles, the building life cycle and maintenance schedules. Together with the use of BIM to deliver this data, ASSA ABLOY UK Specification was able to specify fit-for-purpose, cost-saving and sustainable products.

"We were very impressed with the finish on the products, and the specification process was smooth and simple, with the team able to suggest products and fill in the gaps in our design. ASSA ABLOY UK Specification has a wide range of experience when it comes to supplying educational facilities and provide a range of value added services."

Simon Pritchard, pHp Architects
